Censys Adversary Investigation Workshop

For IT engineers, cybersecurity professionals and red teams who perform threat hunting or infrastructure investigations.

Benefits of Training With Wavelink

Our trainers provide base fundamental understanding of the industry and technology

Courses aid in understanding the solutions available to your end customers

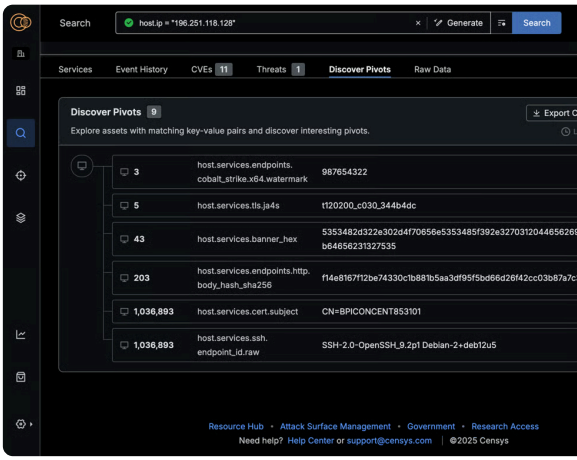
Training is provided holistically to ensure understanding of integrations

Boost your sales by understanding the Hybrid Enterprise landscape and the knowledge to excel

Why Threat Hunting Workshop?

This two-hour interactive workshop provides hands-on experience with the Censys Adversary Investigation module and CensEye in a live environment. After a brief platform overview, participants will dive into practical exercises using real internet-scale data - building queries, performing rapid pivots, uncovering related infrastructure, and shaping reusable hunting workflows.

Attendees will leave with actionable techniques, example queries, and repeatable patterns to enhance investigations, accelerate incident response, and turn external-attack-surface insights into confident security decisions.



Course Content

2 Hour Course | Virtual

What to Expect

- **Platform Overview (30 min)** - Quick setup and intro to the Adversary Investigation module to get you ready to dive in.

- **Hands-on Live Threat Hunting Exercises (1.5 hrs)** - Build queries, analyze real-world scenarios, and develop reusable techniques you can bring back to your SOC.

Why Attend

- **Get hands-on with the Censys Threat Hunting module and CensEye** - QWork in a live Censys instance to experience the full hunting workflow and see how CensEye surfaces rare, shared attributes across assets to accelerate pivots and uncover related infrastructure.

- **Turn Internet-Scale Data into Decisions** - Apply Censys' unmatched visibility to real threat scenarios so your SOC can move from alert overload to confident, high-impact action.

- **Walk Away with Repeatable Hunting Patterns** - Leave with examples of queries, pivots, and workflows you can adapt inside your own environment to speed up investigations and incident response.

Requirements

- Internet with access to censys.io and censysctf.com domains.
- Laptop/computer with an up-to-date browser.
- Access to Microsoft Teams.
